

ROUTENAV

SOFTWARE PACKAGE FOR NAVIGATION SUPPORT AND PLANNING OF GEOPHYSICAL SURVEYS

RouteNav is a Windows-based software package for geodetic and navigation support of airborne and ground geophysics.

Navigational Support application

Navigational support for manned vehicles during the survey with coordinates, altitudes and tracing quality analysis on-the-fly using GNSS and altimeters information.

Planning Tools

Mission planning utility for airborne and ground surveys, including TEM-loops, with the support of various receivers data formats for output.

Analysis tools

Post-fly data processing, quality analysis (accuracy, tracking quality, vehicle height and velocity, etc.), flexible data visualization and web-reporting.

Additional tasks

Coordinates transformation, geo-referencing of raster maps for navigation, etc.
